

**YOUR LIFE.
YOUR ADVENTURE.
YOUR CAP.**

If you are using a flashlight or head lamp to fish in the dark, we have a better option for you in stylish hands free lighting...

Introducing our new 4 LED Bassouflage cap, item #PS4-116

4 lights under the brim: 2 lights angled downwards (low beam) and 2 outwards (high beam)

NO SIGN OF THEM WHEN YOU DON'T

With the LEDs on this cap concealed under-the-brim, the caps preserve the stylish look of traditional non-lighted ball caps which can be embroidered with your company's logo.

2500 Series under-the-brim lighting angles the light downward to light up where your hands and feet are at work while still providing useful forward lighting.

Hands-Free

When your hands are free, you can work more effectively

Innovation

Panther Vision first developed our hands-free lighting devices in 2002, and we have spent the last nine years perfecting and refining the technology.
